

Instructional Materials for Cadaver Lab

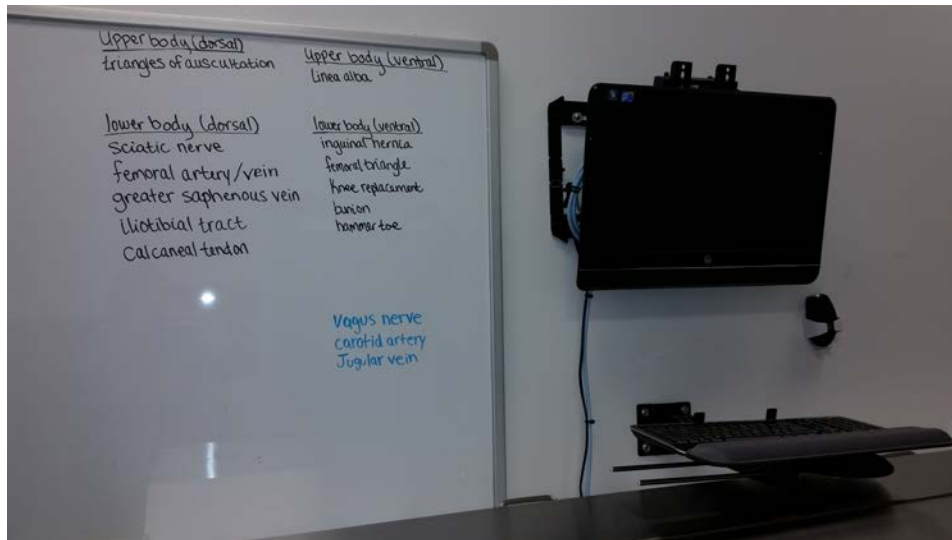

Submitted by Ann M Hight, Las Positas College
Manager/Supervisor: Lisa M Everett
Award: \$989.10

This proposal sought to improve student safety and provide educational reference material for student dissectors working on a human cadaver. I am very grateful for the resources provided by CARE. The student dissectors are also grateful and have spent a lot of energy in ensuring the safety of the lab as well as using the reference textbooks to produce high quality prosecutions of the human cadaver.

Outcome: Wall-mounted systems have been installed to increase the orderliness of the lab, clear useable workspaces and overall decrease the possibility of cross-contamination between dissecting tools and supplies. Further, the students are using the medical school anatomy textbooks as they perform their prosecutions of the human cadaver.

Excerpt from Application: *“The opportunity of students to participate in producing professional dissections of human cadavers is unique to our college. It is a rare privilege at a 2-year college; one that sets LPC apart from other colleges.... While I hope to expand the opportunity, safety is always a concern when working with hazardous materials. The support of a CARE grant will greatly help with this safety concern as well as supporting the unique opportunity LPC is offering its students.”*

New whiteboard listing isolated anatomical structures

Computer keyboard and mouse mounted to the wall

New hooks to hang the lab coats
Wall-mounted system to hold gloves
